

TARANG

National-Level Virtual Debate & Personality Development Programme

Theme: Does God Exist?

Sub-Theme: Influence, Information & the Battle for Minds in the Technological Age

Event Details

Date: 15 February

Mode: Google Meet

Organised by: NIT Jalandhar Student Initiative

Led by: Anand

Programme Vision

In the modern era, power is shaped through information, narratives, perception, and psychological influence. This programme is designed to cultivate clear thinking, structured expression, leadership presence, and ethical awareness among young minds.

Core Objectives

- Develop clarity of thought and structured reasoning
- Enhance articulation and persuasive communication
- Build confidence, initiative, and leadership presence
- Encourage ethical awareness and responsible digital behaviour
- Strengthen logical and analytical thinking

Debate Framework

Central Reflection

In a world of:

- Artificial Intelligence
- Scientific advancement
- Data-driven decision making
- Hyper-rational thinking

We ask:

“Does belief in God still shape civilization?

Or is it becoming symbolic in a technologically structured world?”

Expected Direction of Argument

Note: Participants are encouraged not to drift into abstract philosophical theology alone, but to connect the debate with:

- Modern technology
- Rational thinking culture
- Scientific mindset
- Social relevance in contemporary society

Every idea must have measurable influence. So instead of debating “Is God real?” in isolation, participants should explore:

1 Sociology

- Does belief in God influence social harmony or conflict?
- Does religion shape moral frameworks in society?
- In a technological world, is faith still necessary for social order?

2 Economy

- Does religious belief influence economic behavior?
- How do faith-based institutions impact economic systems?
- Does capitalism reduce reliance on faith, or does it coexist with it?

3 Technology

- As Artificial Intelligence grows, does belief decline or transform?
- Does scientific advancement weaken or redefine the idea of God?
- Is technology replacing existential dependence on faith?

4 Politics

- How does belief in God influence political ideologies?
- Is governance influenced by faith-based values?
- Should policy decisions be independent of religious belief?

5 Psychology & Faith

- Does belief in God provide emotional stability?

- In an anxious, competitive digital age, does faith serve as psychological support?
- Is belief logical coping or irrational dependency?

⚙️ Engineering Mindset Approach

- As engineers, we believe:
- Every system has a structure.
- Every belief has an impact.

⚙️ Debate Structure

1 Host Introduction

- Context setting
- Explanation of rules and expectations

2 Opening Argument

- First speaker presents argument (For/Against)
- Opposing speaker counters directly

3 Crossfire Round

- Structured rebuttal
- Logical questioning
- Evidence-based confrontation

4 Second Argument Round

- New speaker presents dimension
- Opponent counters

5 Final Counter Exchange

- Direct argument clash
- Structured intellectual engagement

6 Concluding Remarks

- Host summarizes key arguments
- Judges' observations
- Result announcement

Judging Criteria

- Participants will be evaluated on:
- Relevance to modern technological context
- Logical consistency
- Depth and clarity of argument
- Strength of rebuttal
- Respectful engagement

Evaluation & Marking Scheme (Total: 100 Marks)

- Clarity of Thought & Relevance – 30 Marks
- Communication Ability & Language Control – 30 Marks
- Initiative, Confidence & Leadership Presence – 20 Marks
- Behaviour & Social Effectiveness – 10 Marks
- Discipline, Structure & Time Management – 10 Marks

Rewards & Recognition

- Winner – Premium Reward Voucher or Cash
- Runner-Up – Voucher or Cash
- Special Recognition – Voucher or Cash

Final Message

This is not merely a debate. It is a platform to test judgement, presence, responsibility, and leadership in the information age.

Think critically. Speak responsibly. Lead consciously.
